## Top Black Space (TBS) -

- **Left** : Shows the current content of clipboard, the content that will be pasted whenever you press Ctrl+V
- **Right** : Shows the content of secondary clipboard, this content will (ideally) be pasted whenever you Middle click somewhere

To copy an item into secondary clipboard, select the item and Ctrl+Middle click.

To paste from secondary clipboard, just press middle click.

If Middle click is toggling the quad directional arrow, then move your mouse a little while middle click is held down and then when it changes to single directional arrow, release the middle click.

**Middle Black Space (MBS):** Maintains a clipboard 'history', keeps a track of all the contents ever copied to the clipboard by using Ctrl+C, (Currently does not work with Right Click + Copy )

When the One click copy mode is enabled, clicking any item will have these effects:

- Left Click: Gets copied to clipboard
- Middle Click: Gets copied to secondary clipboard
- Ctrl + Left Click: Gets copied to secondary clipboard
- Right Click: Gets deleted
- Shift + Left/Right Click near a number: Explained later in CAGR section

**Bottom Black Space (BBS):** Useful for the special mode of 'one after other'.

When the One after other mode is enabled, copy all you want to, in succession, using Ctrl+C.

Then paste all in succession, in the same order you copied, by just using Ctrl+V.

Start oao:

The serial pasting will start from the top of the list, If ever the top item of the list is not the current item in clipboard, clicking on "Start oao" will correct it.

## **Extreme bottom Line: Append Mode**

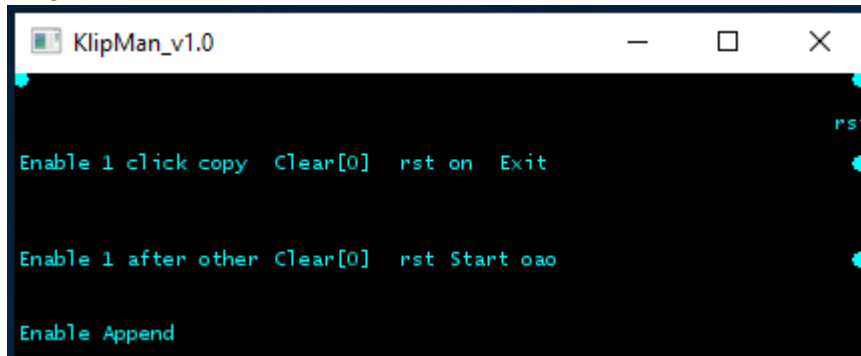

Select some characters or words, which will get added to the end of whatever you are copying.

Ex.

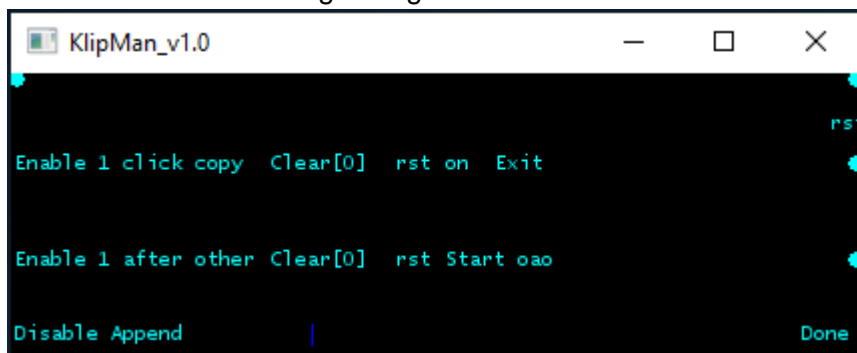

- Select the word (appending character) to append as: " seeds, "
- Copy 3 words in this order: "Apple", "Orange", "Mango"
- Final output: "Apple seeds, Orange seeds, Mango seeds, "
- Click on Enable Append to start this mode. Done will appear on the bottom right of screen.
- Type the words you want to set as appending characters or select the words somewhere and copy them with Ctrl+C, it will take them automatically. You can use Backspace in case of mistakes. Press Done when done.
- Some keyboards provide different inputs, so, if typing to enter the characters, either try typing outside the ClipMan window or try inside. One of the mode should work properly for you.

- Now as this mode is started, just copy the words in the required order, the s/w will automatically append all the required words with the appending characters and the final string will be ready to use in clipboard.

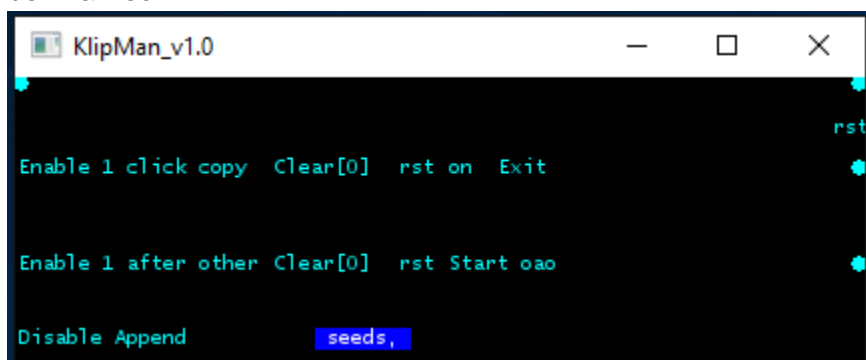

Original:

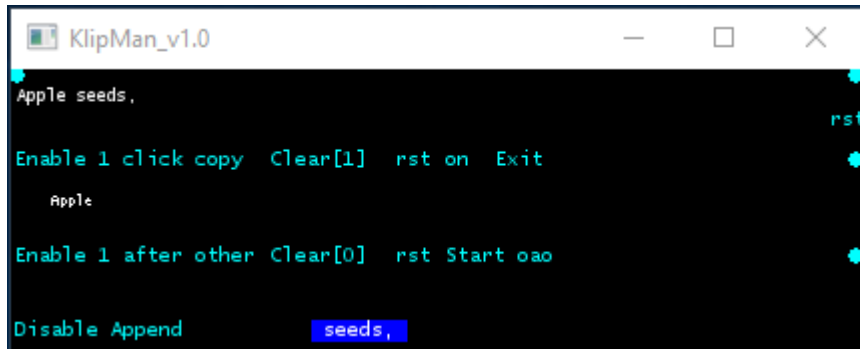

Click on Enable Append to start this mode  
You will see the following changes:

Now, type in the appending characters or you can copy them with Ctrl+C (you can use Backspace for corrections), then press done  
I typed " seeds, ". The "Done" will disappear after you press it and the appending characters will be finalized

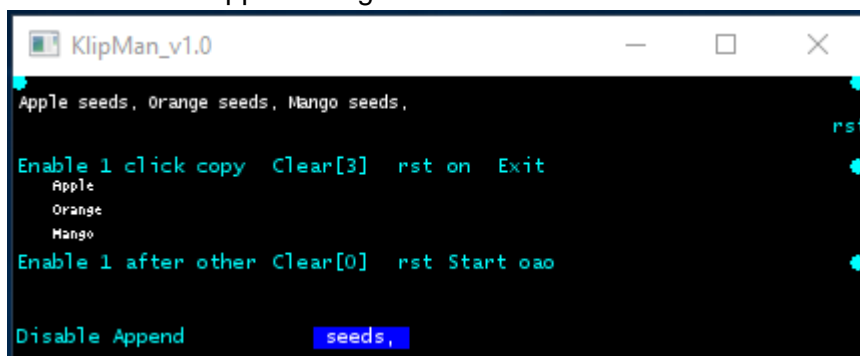

Then I copied “Apple”, as you can see in the clipboard history list, however, the clipboard content, (A) is “Apple seeds, “ as the appending characters got appended.

The screenshot shows the KlipMan\_v1.0 application window. The main display area has a black background with cyan text. At the top, it says "Apple seeds,". Below that, there are three lines of text: "Enable 1 click copy Clear[1] rst on Exit", "Apple", and "Enable 1 after other Clear[0] rst Start oao". At the bottom, there is a button labeled "Disable Append" and a text field containing "seeds,". On the right side of the window, there is a vertical list of items: "rst", a gear icon, and another gear icon.

Next I copied “Orange” and “Mango”, which the clipboard history shows correctly and the current clipboard content is “Apple seeds, Orange seeds, Mango seeds, “ as the appending characters got appended all the three times. You can press Ctrl+Z to undo a wrong copying. Press “Disable Append” to get back to normal mode.

The screenshot shows the KlipMan\_v1.0 application window after copying "Orange" and "Mango". The main display area now shows "Apple seeds, Orange seeds, Mango seeds," at the top. Below that, the text is: "Enable 1 click copy Clear[3] rst on Exit", "Apple", "Orange", "Mango", and "Enable 1 after other Clear[0] rst Start oao". The "Disable Append" button and the "seeds," text field are still at the bottom. The right side of the window shows the same vertical list of items: "rst", a gear icon, and another gear icon.

## CAGR mode:

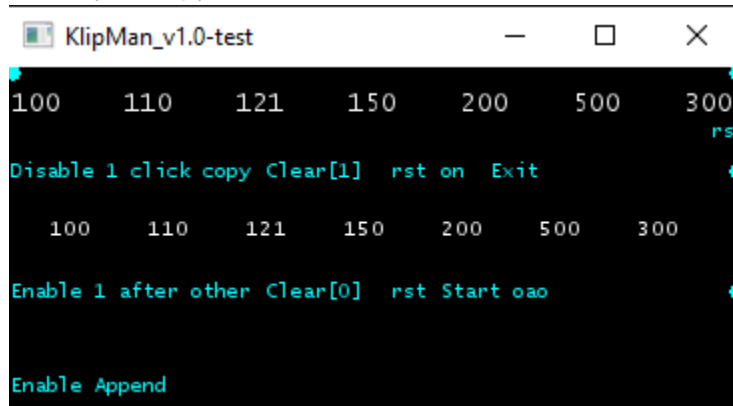

The two-click CAGR calculator feature only works in MBS and on tab separated data:

Ex.

Let this be the data

100    110    121    150    200    500    300

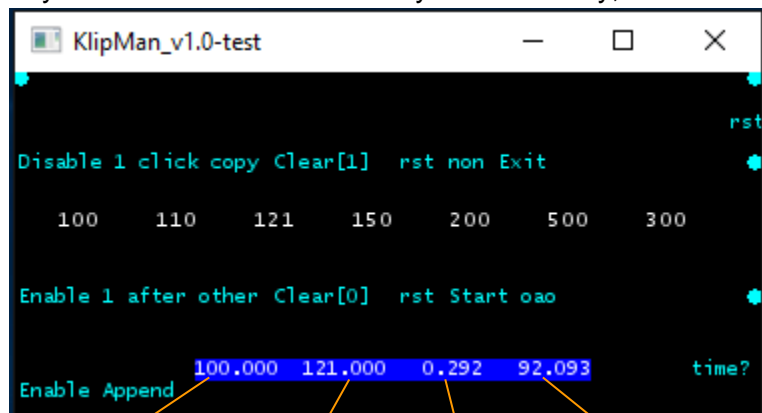

When you copy the data, it'll look like this.

Now Shift+Left Click on 100, Shift+Right Click on 121

It selects the first and second number respectively. And also gets the time interval by finding the number of tabs between the data points. There are two tabs between 100 and 121 hence it took the number of years as two.

If you want to enter number of years manually, click on “time?”

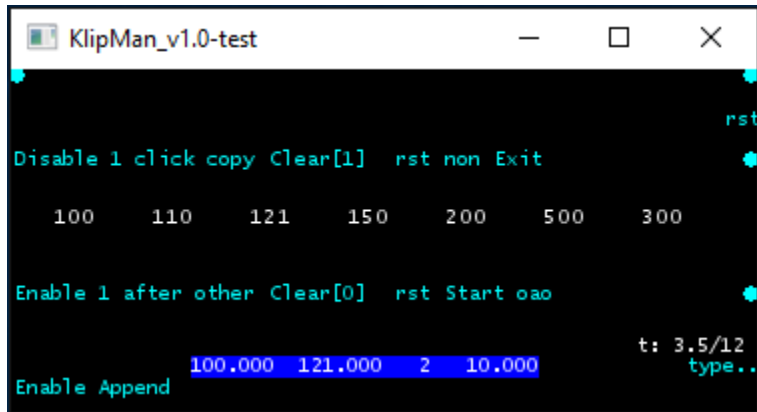

CAGR from

CAGR to

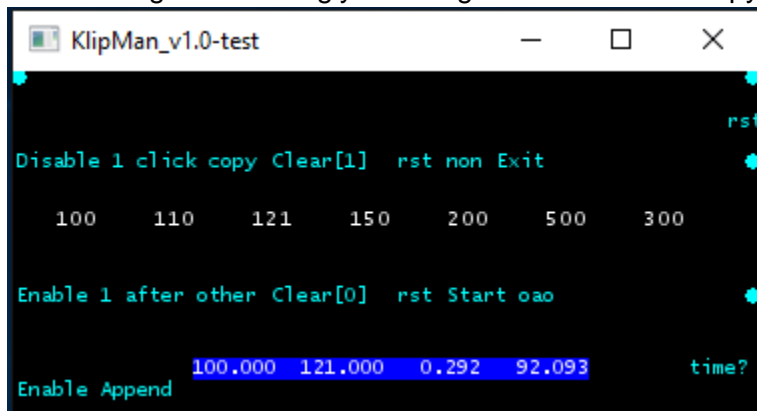

time

Calculated CAGR

After clicking click on “time”, you will see the text “type..” and “t:”. Then type the needed time. (ex. I typed 3.5/12). Dots for Decimals and Slashes (/) for divisions are acceptable syntax for entering the number. Press Enter or Click on type.. finish entering time.

$3.5/12 = 0.291666$  which is rounded off to 0.292 for display. Hence the time is entered and value changed accordingly. Clicking on the value will copy the CAGR to clipboard.

Button (valid in)	Action
Left Click on any item (MBS)	Copy it into clipboard.
Right Click on any item (MBS)	Delete the item
Middle Click on any item (MBS)	Copy it to Secondary Clipboard
Clear (MBS and BBS)	Clear all the items in the corresponding space
Cyan dot at top, extreme left	Clears clipboard.
Cyan dot at top, extreme right	Clears secondary clipboard
rst (MBS and BBS and TBS)	Brings the items back to default position if accidentally scrolled beyond recovery.
Scroll up/down	Move the items in respective spaces up/down
Alt + Scroll up/down	Move the items in respective spaces left/right
Ctrl + Scroll up/down	Increase size of items in respective spaces up/down
non / on	Turns off or turns on Always on Top mode, respectively
Shift + Left Click near a number (MBS)	Extracts number for the 'from' for CAGR.
Shift + Right Click near a number (MBS)	Extracts number for the 'to' for CAGR.
Left Click on "time?"	Enables manual time entry for CAGR calculation (only when CAGR mode is on)
Right Click on "time?"	Disables CAGR mode
Left Click on "type?"	Accepts the written time or Enter (only when CAGR mode is on)
Drag the 2 cyan dots at right	to change size of respective spaces
Ctrl + Z	Undo (currently limited at 3, changeable)
Ctrl + Y	Redo (currently limited at 3, changeable)
Ctrl Shift + L	Load a file from the given options, click on the option (all the klip files in the folder)
Ctrl + L	Loads from the autosave.klip file if present in the folder
Ctrl + Shift + S	Save As, type the name you want to save the current file as. (without .klip)
Ctrl + S	Saves in autosave if no current file present, else saves in the current file
Esc.	Back from the mode of Save As or Load File
“`” (grave)	Exits the software

If the copied selection consists of multiple lines, (separated by newline character or Enter) the font of the corresponding display becomes gray and 1 unit smaller to better distinguish it from other items in the list.

A '~' character in such a font indicates a new line

Do ping me in case of any bugs or suggestions...  
Enjoy Copy-Pasting :)
